ELAN Hosted Video Surveillance

offers all of the advantages of IP-based video surveillance while eliminating the prohibitive costs and complexity. Imagine a video surveillance system that can be operated and managed in a web-browser, from anywhere the internet reaches.

No additional hardware or software needed. Plug a Hosted Video Surveillance enabled network camera from the industry leader, Axis, into any broadband internet router, and it auto-negotiates its connection with the Hosted Video Surveillance servers. No extra configuration necessary.

Features and Benefits:

- Professional-quality on-demand surveillance with remote viewing and administration.
- No bulky hardware: no PC or DVR required, only Axis STS enabled cameras, broadband internet and a router.
- No special software: just a compatible web browser.
- No complex network installation: cameras auto-negotiate their connection with the servers.
- Footage stored remotely, eliminates vulnerability from theft, natural disasters, and computer problems/viruses
- Minimal initial investment, helps defray costs making budgeting more feasible.
- Plug it in and it works!
- Easy installation can be performed by any end user with a DHCP-enabled internet connection.
- Monitor Video over the Internet from your home, office, PC or mobile phone.
- Seamlessly handles dynamic IP addresses, private IP addresses, NAT and NAT Traversal, as well as firewalls.
- Secure authentication of users and cameras, as well as encryption of transmitted video and data.
- Schedule e-mail alerts for motion detection and video loss.
- Live viewing of video and recording of video sequences.
- Motion-triggered alarm sequences
- Manual recordings
- Scheduled recordings
